

NATINA[®]
STEEL SOLUTION

Project Name: Milwaukee Brewer's Spring Training Facility

Materials applied with Natina: All galvanized chain-link fence, posts and railing including all hardware

How Milwaukee Brewers Got a New and Improved Place to Practice

Natina was part of the American Family Fields of Phoenix renovation project, which the Milwaukee Brewers call home during spring training. Natina was applied to chain-link fences for a rustic brown finish and their affiliate company, West Coast Turf, supplied new natural turfgrass sod and sprigs to the stadium.

Natina was recommended as a zero-maintenance alternative to paint or vinyl coating. Since the fences are a major focal point, it was important to have a natural patina that blended well with the stadium backdrop and vegetation. Natina Steel Solution was expertly applied to more than 2200 linear feet of galvanized chain-link fences, posts, top and bottom rails, hardware and components. With all the moving parts, the project was done just in time for spring training season to start, and the Brewers got to enjoy a renovated stadium.
