

Project Name: Warty Pig

Materials applied with Natina: All galvanized fence parts including panels, poles and hardware

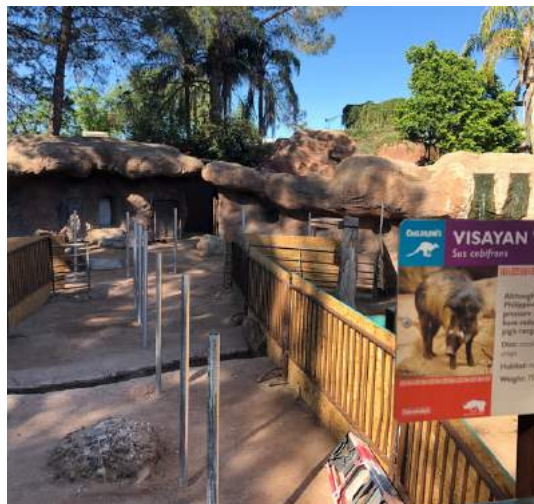

How the Phoenix Zoo found a natural color solution for their Warty Pig Exhibit

The Phoenix Zoo was in need of fencing that was natural-looking and non-toxic around animal exhibit. Based on recommendations, the zoo reached out to Natina to determine how we could help. Before the project moved forward, Natina was evaluated, and then approved by their zoologist to ensure the animals would be safe around the reactive color treatment. For the zoo's project, they needed fence panels to naturalize the zoo's landscaping with no maintenance required. When the pigs brush mud against the fence, the Natina finish complements this. The natural patina gives the pigs and the patrons a beautiful enclosure to look at.

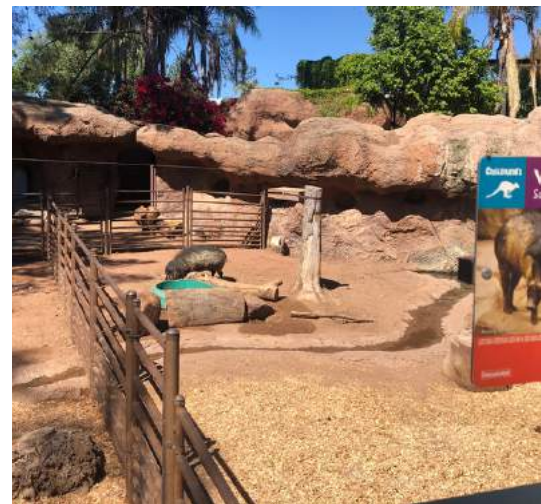

Natina Steel Solution is a mottled and distinguished finish that naturally bonds to the zinc that does not fade, discolor crack or peel. How can we help your project? To learn more about our projects or to set up a presentation, email info@natina.com or call 1(877) 762 - 8462.
