

NATINA®

REACTIVE COLOR TREATMENT

Project Name:
Warty Pig

Materials applied with Natina:
All galvanized chain-link fence, posts and railing including all hardware

BEFORE

Fence poles before Natina Steel Solution is applied.

AFTER

Natina on galvanized steel panel fencing at Phoenix Zoo.

How the Phoenix Zoo Found a Natural Color Solution for Their Warty Pig Exhibit

The Phoenix Zoo needed animal fencing that was safe around the warty pigs and fit in well around animal exhibit. Based on recommendations, the zoo reached out to Natina to determine how we could help. Before the project moved forward, Natina was evaluated, and then approved by their zoologist to ensure the solution was non-toxic for the animals.

For the zoo's project, the fence panels would need to naturalize the zoo's landscaping and provide a low maintenance option. The Natina finish blends in mud or other debris when the pigs brush against the fence. The natural patina gives the pigs a safe solution in their pin while providing the zoo patrons a beautiful enclosure to view.

Natina Steel Solution is a mottled and distinguished finish that naturally reacts to galvanized metal surfaces for a lasting color.

We'd love to be part of your next commercial project.

Warty Pig fence fully installed with Natina Steel Solution.
