

NATINA®

REACTIVE COLOR TREATMENT

Project Name:
SR 76 Middle

Materials applied with Natina:
All galvanized parts including chain-link, wildlife fencing and hardware

Natural Patina Finish on Wire Mesh

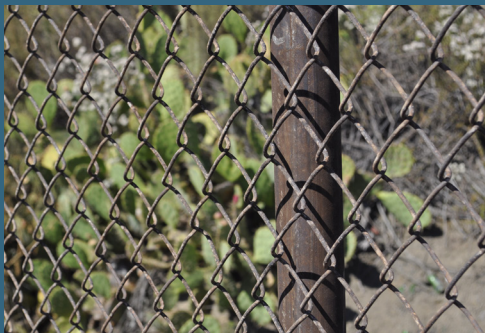

The Caltrans SR 76 Middle Project in Southern California included a realignment and widening to four lanes. The project was completed in 2012.

On the south side of SR 76 (between Via Montellano and North River Road), Caltrans designers and engineers wanted a natural finish with the benefits of galvanized steel. They specified Natina Steel Solution for a natural color option that better blends into the environment. Our reactive color treatment uses technology from nature to create a weathered brown patina.

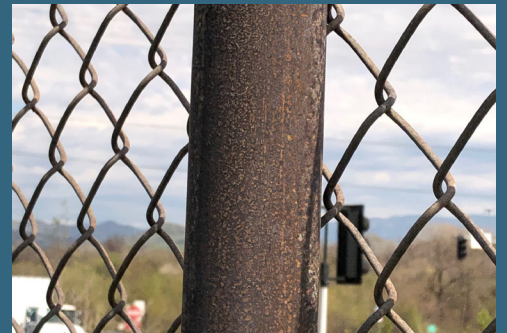

Everyone involved in this project were pleased, as the fencing not only enhanced the surrounding area but also provided essential protection for the animals from the nearby highway.

Natina chain-link and wildlife fencing before installation

Natina Steel Solution applied in 2012
